6b Specimen-bead center: prediction versus corrected observation
Sections through the first catalogue bead; nearest available planes, no interpolation or fitted-peak recentering

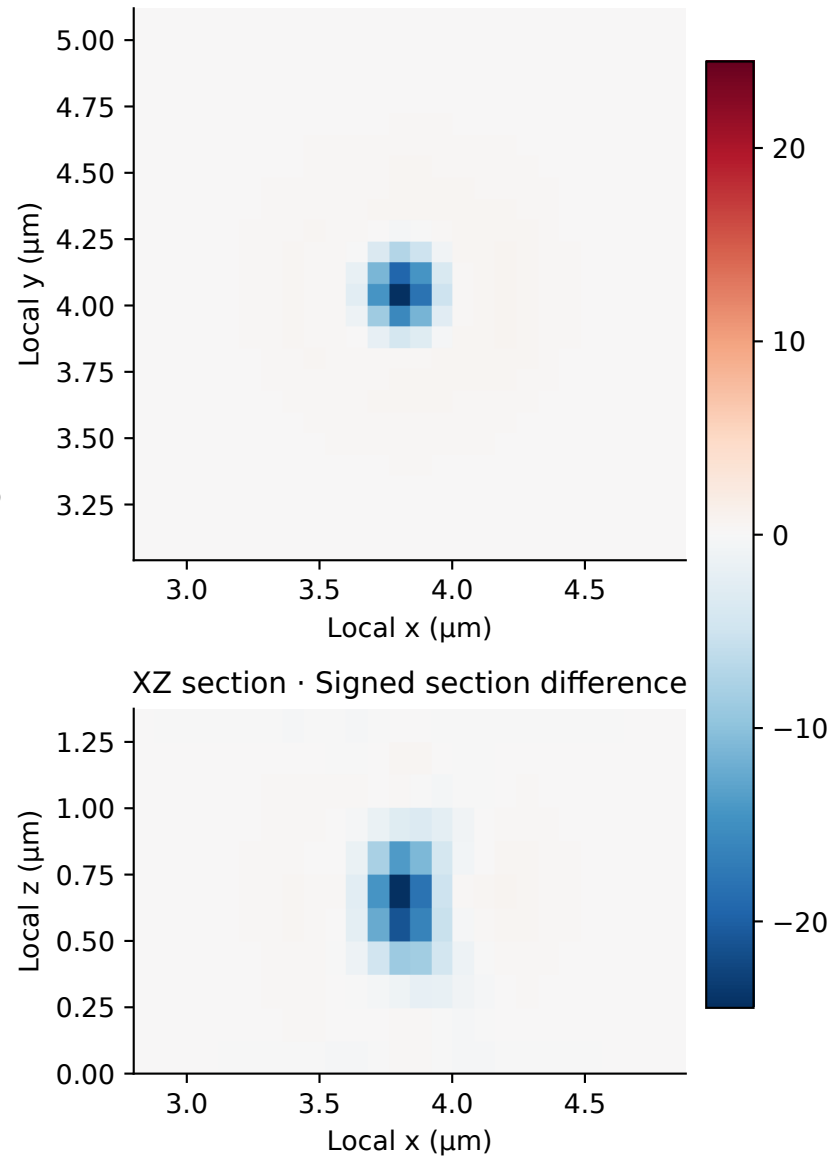

XY section · Corrected observation

XY section · Frozen prediction

XY section · Signed section difference

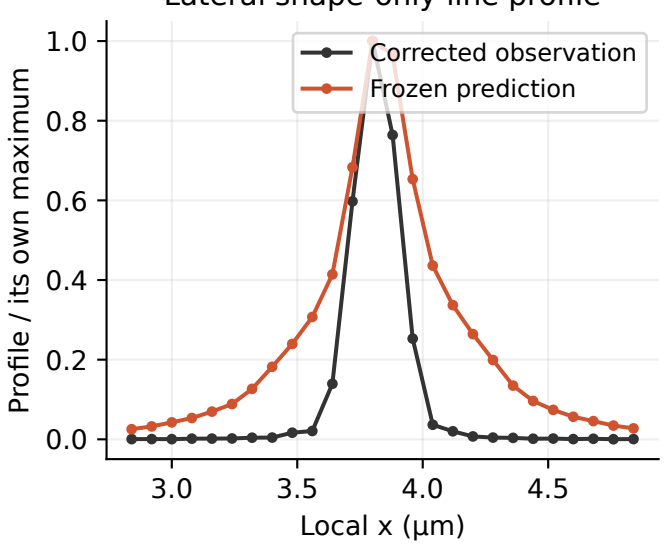

XZ section · Corrected observation

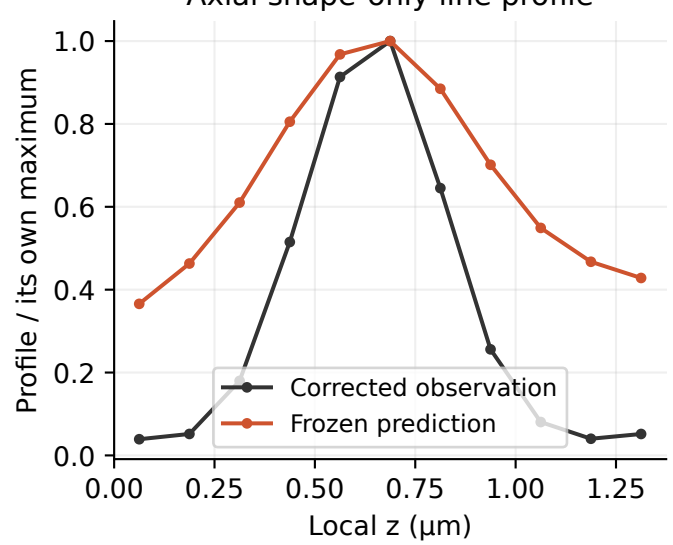

XZ section · Frozen prediction

XZ section · Signed section difference

Lateral shape-only line profile

Axial shape-only line profile

First catalogue bead (local µm)
z=0.6500, y=4.0500, x=3.8500

Actual section planes
XY: z=0.6875 µm
XZ: y=4.0400 µm

Main images: common quantitative scale.
Profiles: separate peak normalization,
shape only; no alignment or recentering.
