
3 Image-only bead / illumination calibration, then held-out prediction
Fixed orientation 1, exposure 1, local z = 0.5625 µm · 2.56 × 2.56 µm field · ten sweeps, 940 finite polls
Corrected held-out observation
Frozen bead-model prediction
Prediction − corrected observation
Residual RMS over each complete 8 × 32 × 32 volume
Local x (µm)
Local y (µm)
